

AUTOMATIC CONFIGURATION OF EQUIPMENT SOFTWARE

ABSTRACT OF THE DISCLOSURE

An architecture for automatically configuring software of a piece of equipment. The piece of equipment is in communication with a network, the piece of equipment having one or more machine-resolvable codes associated therewith. The piece of equipment connects to a remote location disposed on the network in response to reading a select one of the one or more machine-resolvable codes with a reader. Software associated with the select one of the one or more machine-resolvable codes is downloaded from the remote location to the piece of equipment, and the piece of equipment is then configured according to the software.
